Summary

Dr. Dinesh C. Sharma born in 1973. His field of Specilization are Toxicology, Biochemistry and Molecularbiology and field of Innovative Expertise are Bio-mucicology (Music Therapy) and eEducation. He has been teaching and research in Government Colleges of U.P. since 2000. He is the founder chairperson of Indian Association of Music Therapy (IAMT). He establishes IAMT with a motto to "Establish music as a tool of therapy to treat various disorders scientifically and establish music to use as drug in future". He is also known for starting practical use of ICT in Govt. Colleges of U.P. (2007) and establishes first Smart Class in Govt. P. G. College, Noida in 2010. More than 150 of his research paper, articles have been published in journals, magazines, souvenir, proceedings and newspapers of national and international repute. His 6 books were published by international publisher. He has participated in 31 training courses on various topics and organized 19 seminar, conferences and workshops. Under his supervision 2 candidates awarded M.Phil and more than 800 students completed their projects. He is also known as an expert of eEducation, bio-musicology and geno-toxicology. His lectures and interviews are telecast on various television channels time to time. He is also assigned additional work as Member-NEP-2020 Steering Committee of U.P., State Syllabus reorientation committee, ABACUSUP, NCC Syllabus committee, Nodal Officer (Directorate)-RUSA, Member PAB-RUSA, Advisor-UPSAAC, SLQAC, and Website by government. He is honored by Shiksha Rattan Purshakar-2013, Shichak Shree Samman-2015 (UP State Award) and IAES-gold medal (2019). He is featured in "ScoopNews" international magazine in 2017 for his work in music therapy. Nodal officer of two UGC sponsored B.Voc. Course in Medical Lab and Molecular Diagnostic Technology, Airline, Tourism and Hospitality Management.

My Teaching Philosophy: Eco-friendly Paperless education

In my opinion the overall development of a nation depends upon the nature of its education and education system. Mentality of a youth developed during his/her higher education impact their life and gives a direction to the nation. So “reform in education” is more important than making various kinds of law time to time for emerging various problems such as “LOKPAL” for corruption. By fear we can force animal to work, human cannot force to work by the fear of law. It is their mentality and thinking which direct them to do the work with good motives. And this can only be done by our educational institutes, but unfortunately now a day’s collages are empathize on “higher earning youths” rather than “youth with morals”.

- ☐ My overall philosophy of teaching is simple: In my opinion there are four steps of education-
- | | | |
|-----------------------|---|--|
| ☐ Primary Education | : | Broad Motive-To literate people |
| ☐ Secondary Education | : | Broad Motive-To provide knowledge & information |
| ☐ Higher Education | : | Broad Motive- Analysis & expansion of knowledge, ethics |
| ☐ Research | : | Broad Motive-Innovation |

So I always believe it is more important to create a mindset of students of higher education that “How they can use their knowledge & information for the betterment of society. Mean that I emphasize on analysis rather than providing only knowledge & information to, them as we can see in most of higher education institutions preparation of NOTES is a common practice. As we know in the world of ICT, Information of world is available just on click of mouse.

For example if a person required a statistical programme then-

- ☐ Person go to any search engine-Type statistical programme- several programme from the world **information** are in front of his/her eyes

Now all the name of statistical programme his/her search becomes his/her **knowledge**.

- ☐ After that his/her have to desire which is suitable and how he/she can use it for his/her purpose-This can be done only by **analysis** of information & knowledge

He/She can input some innovation in programme by **research**

A part of my role as a teacher is to facilitate the learning of factual information and key principles, however my job only begins there. When I think back to the outstanding teachers in my life that helped mold me into the person I am today, I remember those teachers that truly motivated me to reach new heights, those that stimulated my ability to think critically and to understand the subject matter on a deeper level, those that imparted their passion for learning on me, and especially those that gave a certain unquantifiable piece of themselves (can I call it love?) that in many ways transformed my intellect, my attitudes, my goals, and my life. I aspire to be this kind of a teacher. What follows here is a documentation of some of the means by which I attempt to carry out this aspiration.

I believe that learning is an active process. My role as teacher is to be a guide to this process, not merely by supplying essential information, but by providing the means to acquire knowledge independently and to utilize learned ideas in new situations. I strive to stimulate students’ critical thinking skills and intellectual growth in order to set the stage for lifelong learning opportunities. Two necessary ingredients to achieve these goals are my mastery of and (perhaps more importantly) my enthusiasm for the subject matter and responsibility towards society. I endeavor to bring about similar mastery and enthusiasm among my students. While success in achieving this goal may depend on each individual student, properly motivated students do enjoy the learning process as they take an active role in it. I find that the best motivator for students is their own curiosity. The nature of the biological sciences is that one “piece of the puzzle” often provides other questions which remain unanswered. My favorite event in teaching occurs when the class subject matter leads to a student question for which I do not know the answer. I like to challenge the students to find and bring the answer back to class (and to me). In this way, comprehension of the subject matter is reinforced and more importantly, students observe that scientists (such as me) are continually seeking answers and learning.

In lectures, I utilize ICT, PPT, animation, video to provide key factual information with accompanying illustrations. I also use smart class equipment’s for increasing concentration and interaction of students. The store information can be seen by students further as a live class whenever they want. I also use virtual dissection in lab before hands on the students on preserved animals, so we can also minimize the wastage of dissecting animal. All kind of information used by me is made available before & after class. This liberates students from the need to take notes on everything that is presented and allows time for critical thinking, questioning, and discussion based on the information presented.

My experiences to date suggest that at least at some level, I am succeeding in my undertakings as teacher. However, I am well aware that there is my room for me to evolve and grow and that I can also actively learn to be a better teacher - from my colleagues and from students’ learning experiences. I believe that my goal of becoming an outstanding teacher is a journey rather than a destination. I am excited to continue on this journey.

Research contribution:

Bio-musicology /Music Therapy (16 years)

- Today we are living in sea of various type of synthetic chemicals which are using in medical, agriculture and industries, they are creating types of serious diseases or disorder, to cure them we are again using chemicals in form of drugs. There is no doubt that drugs have the ability to cure disease and disorders but on the other side it is a well established fact that each drug has some short of side effects on the body and some time side effects are converted in to serious problems.
- Music is a new field in therapeutic use. Music therapy is incorporated in a number of medicines. Some of these include labor and delivery, oncology, pain management, physical rehabilitation and pediatrics. Music therapy has been shown to have influence on the immune system, BP, Heart and respiratory rates and pain perception. There are various theories have been explained by musician and music therapists to explain the role of music therapy but little have been done on scientific way to know, how the music effect metabolism, gene activation, biochemistry, hematology and physiology of livings. I find more important to discuss is how music therapist are using these theories to reflect upon their work. I believe that these theories are providing foundation of practical which establish the fact.
- It is an established fact that brain is controlling entire metabolism, gene activation, biochemistry, hematology, physiology etc. of the body through different mechanisms and if any mechanism disturbed by any agents (antigens) it reflects in form of disease or disorder. So anything which is capable to influence the brain also influences the entire metabolism and physiology of body. No doubt this can be done by sound vibrations in form of music.
- Our scientific studies prove that music can affect physiological functions, such as respiration, heart rate, and blood pressure. Music has also been shown to lower amounts of the hormone cortisol, which becomes elevated under stress, and to increase the release of endorphins, the body's natural "reel-good" hormones.
- Our study is an attempt to bring forward the beneficial effects of music on human body and would help in future to adopt as a drug.

Genotoxicology- Fifteen years of research experience (including Ph.D) in the area of genotoxicology. The main focus of my research is-

- How toxicants are affecting our Chromosome, Nucleic acids
- What is the effect of such changes on the hemato-biochemistry of the livings?
- How we can incorporate a change in pyrethroid so they have least effect on non-target group

Significant findings of my research work-

- The toxicity of λ -cyhalothrin is dose dependent.
- Females are more susceptible than their male counterpart's against λ -cyhalothrin toxicity.
- The LD₅₀ of dermal route is much higher than oral route due to slow rate of absorption.
- λ -cyhalothrin reveals clastogenicity in cultured lymphocytes (leucocytes) after prolonged treatment on account of necrotic change and oxidative stress. DNA degradation is highlighted in gel electrophoresis and supports the clastogenicity of λ -cyhalothrin. λ -cyhalothrin exerts its effect by altering the nucleic acid metabolism and protein synthesis, as a result of which DNA, RNA have been observed to be elevated in the blood of albino rats.
- λ -cyhalothrin causes pronounced alterations in serum lipid profile as total lipids, total cholesterol, phospholipids and lipoproteins viz. VLDL, LDL, HDL of the blood reveal significant changes in treated groups of albino rats.
- Rise in the activity of serum alkaline phosphatase is supposed to be an outcome of degenerative changes of hepatocytes following λ -cyhalothrin intoxication.
